

## **Task 1: Responsive Landing Page**

Submitted By

Name: Neha Pandiya

College: KL University, Hyderabad

Internship Domain: Web Development

Organization: SkillCraft Technology

Task: Task 1 – Responsive Landing Page

Date: 27 June 2026

## Objective & Introduction

### Objective

The objective of this task is to design and develop a responsive landing page using HTML, CSS, and JavaScript. The website provides a modern interface with a fixed navigation bar, smooth scrolling, responsive layout, and attractive sections.

### Introduction

A landing page is the first webpage users interact with when visiting a website. In this project, a responsive landing page was created using HTML, CSS, and JavaScript with a hero section, navigation bar, services, contact section, and footer.

## Technologies Used

HTML5

CSS3

JavaScript

Visual Studio Code

Live Server Extension

## Features Implemented

Responsive Layout

Fixed Navigation Bar

Navigation Color Change on Scroll

Hero Section

About Section

Services Section

Contact Section

Footer

Hover Effects

Mobile Responsive Design

## Folder Structure

## Mobile Responsive View

## Learning Outcomes

Learned HTML page structure.

Improved CSS styling skills.

Implemented responsive web design.

Used JavaScript for scroll effects.

Built a complete landing page from scratch.

## Conclusion

This task strengthened my front-end web development skills. By combining HTML, CSS, and JavaScript, I successfully developed a responsive landing page with a modern user interface that works across different screen sizes.
